

# How to replace a Drum on an e-Studio 287 / 387 / 407

Lift up the "ADF" unit

Press "button" to release tray

You can now see the toners

Black Toner in locked position

This process is the same for each Drum

Lift Toner out

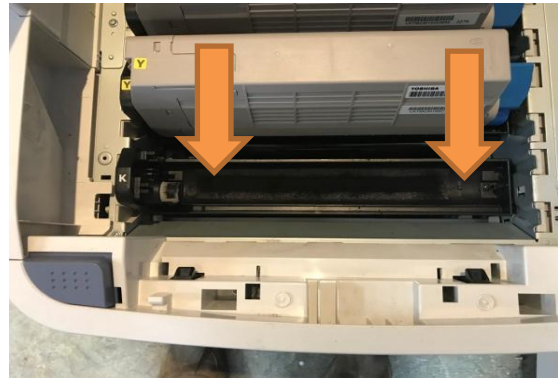

Toner & Drum come out together

Drum (black) & Toner (Grey)

Insert new drum

Release Toner from Drum by releasing the blue catch keeping the grey toner upright

Replace Toner (grey) into Drum and Lock

When separating the drum from the toner be careful not to spill toner! It's not dangerous but is dirty!

Now close all the covers.

You have now passed your "introduction to engineering" level 1 ...well done!
